

**LABSPACE**  
AFRICA

More than just a laboratory. We are your partner in research and analysis.

[www.LabSPACE.Africa](http://www.LabSPACE.Africa)

**LabSPACE Africa** is a private company that provides facilities to local and international researchers in South Africa. Facilities for use include research space, space for archiving samples long term, as well as space in our climatic units for stability assessments.

**LabSPACE Africa offers space for researchers, biotech companies and consultants to collaborate and thrive.**

**Mission:** To offer a state-of-the-art analytical chemistry facility, while offering a co-laboratory space for startups, private research and industry in different fields to conduct research, and have analysis done in an accredited environment.

**Vision:** LabSPACE Africa's vision is to lower the entry barriers to market for new biotech companies in Sub-Saharan Africa, giving our clients a strategic advantage across numerous research fields. Allowing scientists to focus on their research and results.

# ANALYTICAL SERVICES

LabSPACE Africa built its first analytical facility around the pharmaceutical, food and agriculture industries, but are open for collaboration with any industry partners

LabSPACE Africa has a fully fitted sample preparation facility which includes SPE stations, ultrasonic baths and sample dryers. We also offer a comprehensive line of pharmaceutical testing with the following technologies:

- HPLC
- UPLC with tandem MS and PDA detectors
- ICP-MS
- FTIR Spectrometer

**Contact us to discuss how we can help your business**

**[www.LabSPACE.Africa](http://www.LabSPACE.Africa)**

# BIOBANKING

**Backup trial samples or research samples are often stored for future analysis.**

LabSPACE Africa has long-term storage units at various temperatures available (5°C; -20°C; -80°C and -160°C). Once received at our facility, samples are marked with cryo labels, stored in standard (2ml) cryo boxes, and recorded in a cloud-based LIMS. Units are constantly monitored with Beyond Wireless remote temperature monitoring system, and backup power and contingency planning are in place.

# CLIMATIC TESTING

## **Climatic chambers are used to assess the stability of pharmaceutical products.**

**Scan QR code  
to read more**

These stability assessments are required for all pharmaceutical products, and changes in South African legislation will require complementary medicine to comply with this requirement. LabSPACE Africa has several climatic chambers which carefully control the temperature and humidity. These units' temperature and humidity data are logged and monitored with the Beyond Wireless monitoring system, and backup power and contingency planning are in place. The process is guided by validated procedures and logged in our Laboratory Information System (LIMS).

# EQUIPMENT

For private sector laboratories, the acquisition of new equipment is a costly exercise with high risks. LabSPACE Africa has partnered with industry leaders for analytical equipment.

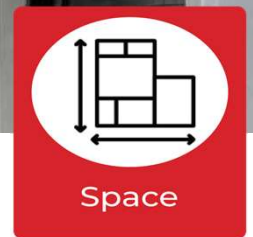

Equipment are available with the required analytical support at our facilities, but equipment can also be placed on lease at our client's facility for a specific project, ensuring that the budget of our clients do not get spent on instruments that are used sporadically or only once. All equipment will be maintained and serviced by qualified staff, and copies of maintenance records will be available after completion of a project.

Currently academic institutions acquire high-cost equipment mostly through grant applications which delays their project. LabSPACE Africa can speed up this process and allow researchers to evaluate the best option for their needs, before committing, or even simply using the equipment on lease, or at our facilities.

# SPACE

For clients looking for a partnership or wanting to rent lab space, LabSPACE Africa gives them access to analytical laboratories at competitive prices to run their own facilities without the overhead costs of running their own laboratory.

Laboratory space includes inclusion in compliant services and operations relating to compliance with local regulation, the safety of staff, as well as the management of biological and chemical waste. Contact us for space at our facility or we assist you with the processes involved in setting up your own facility.

# CONSUMABLES

LabSPACE Africa has strategic partnership with AXIOLOGY Labs. AXIOLOGY Labs will manage consumable storage facilities at all our laboratories and items that are in stock can be provided within hours to our clients , removing the costly commitment of keeping stock on hand.

# TRAINING

Clients who register with us will be invited to regular training sessions on the specific technologies in our units or regulatory guidelines such as GCP, GLP, GCLP, GMP ISO15189, ISO/IEC17025 and ISO13485. Training will be provided by industry experts and individuals registered with regulatory bodies.

# EXPERTISE

LabSPACE Africa prides itself on a unique blend of expertise from science through to Regulatory Compliance. This together with our wide network of advisory Scientists and suppliers allows LabSPACE Africa to provide consultation on request.

We can assist with advising and customising methods to the needs of the client, or assist with regulatory and accreditation requirements, including assistance in permits, registration and or accreditation.

LabSPACE Africa offers, assistance and guidance on various regulatory guidelines: Assistance with Quality Management Systems (ISO 13485 ; ISO 15189; ISO /IEC 17025 & GCLP)

# LABORATORY SET-UP

**Scan QR code  
to read more**

Our staff have ample experience in analytical laboratory setup and can assist laboratories with turnkey solutions from architectural design, engineering plans, modular laboratory set-up, furnishing of both laboratories and administration areas and assisting with a customised Quality Management System (QMS).

With access to all the services of our strategic partners, LabSPACE Africa will be able to offer clients quick access to a wide range of equipment and consumables.
